

Claim:

Having described my invention I claim:

I have developed a door-jamb repair assembly kit consisting of an aesthetic plate, a jamb bracket and screws. I claim that this assembly provides an aesthetic method to repair door jambs that have been damaged when the jamb bracket has been torn from the door-jamb.

The assembly will cover the damaged door jamb area that has occurred as a result of the original jamb bracket being torn from the door-jamb. It also provides a universal method of repairing different sections of the door-jamb as the screw holes are located in three different areas on the plate allowing the plate to be placed at any position on the door-jamb. In addition, my method of fastening the plate to the door-jamb and into the rough framing greatly increases the force necessary to pull the replaced door-jamb bracket from the door-jamb.

Revision as requested.
